In today's interconnected world, video surveillance iseverywhere. Public concern over the protection of privacy has grown as a result. With KiwiVision™Privacy Protector™, we help you safeguard the privacy of customers, employees and citizens without sacrificing security.

Ensure privacy without compromising evidence

KiwiVision Privacy Protector is a module of our Security Center platform designed to ensure the privacy of individuals recorded by your video surveillance system while safeguarding potential evidence.

It dynamically anonymizes individuals in the camera's field of view without obscuring actions and movements. This ensures your ability to proactively monitor events is not affected.

Keeps movements, actions and events recognizable

Control access to original footage using privileges and groups

Operators see only what they need to see

Using permissions, you can easily control which operator can review the original footage. When an incident occurs, authorized operators can access it directly from Security Center's monitoring interface, ensuring investigations are not slowed down. The original recording can also be encrypted using certificates and chip cards to prevent unauthorized access.

Adheres to the most stringent privacy standards

KiwiVision Privacy Protector is the only solution that has received the European Privacy Seal certification for its ability to protect the identity of individuals within video surveillance recordings. With this certification, the module is considered to be GDPR-ready.

How it works

The KiwiVision Privacy Protector gives you full control over which cameras require anonymization. It lets you select individual cameras and control the level and type of anonymization to use, such a pixelation, blurring or obscuring using opaque coloring.
